"Now I'm going to ask you to join me in a series of games.
I will ask you several questions about the chance or likelihood that certain events are going to happen. There are 10 stones on the black plate. I would like you to choose some stones out of these 10 and put them on the white plate to express what you think the likelihood or chance is of a specific event happening. One stone represents one chance out of 10. If you do not put any stones on the white plate, it means you are sure that the event will NOT happen. As you add stones, it means that you think the likelihood of the event happening increases. For example, if you put one or two stones on the white plate, it means you think the event is not likely to happen but it is still possible. If you put 5 stones on the white plate, it means that it is just as likely it will happen as it does not happen. If you put 6 stones on the white plate, it means the event is slightly more likely to happen than not to happen. If you put 10 stones on the white plate, it means you are sure the event will happen. There is no right or wrong answer. I just want to know what you think."
